1. Applicant's election without traverse of Invention II and Species I in the reply filed on February 15, 2006 is acknowledged.
2. Claims 1-23 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed February 23, 2006.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 23-30 are rejected under 35 U.S.C. 102(b) as anticipated by Miotto (US Patent 6,213,552).

Miotto discloses a chair adjustment mechanism comprising:

- A cam (254) rotatable between a first position (Fig 9) and a second position (Fig 10);
- a bearing member (228) perpetually bearing against said cam;
- a join between the cam and bearing member such that rotation of the cam between the first and second positions translates the bearing member (shown by figures 9 and 10)

Art Unit: 3682

Regarding claim 24, the join comprises an indentation (262) on the bearing member and a protuberance (260) on the cam.

Regarding claim 25, the cam has a nose, the protuberance is located at the nose.

Regarding claim 26, an abutment (246) is perpetually bearing against a side of the bearing member opposite the cam.

Regarding claim 27, the bearing member is a bearing plate.

Regarding claim 28, when the cam is in the first position, a first cam face abuts the bearing plate, when the cam is in a second position, a second cam face abuts the bearing plate, said nose being between the first and second cam faces. (see Figure below)

Regarding claim 29, the cam is rotatably fixed on a pivot (252).

Regarding claim 30, the bearing member has a surface (258) engaging the cam and an opposite surface slidingly engaging an abutment.
